SUMMARY

UX/UI Designer with 2+ years designing information-dense workflows for AI-powered SaaS products. I turn complex processes into usable, accessible experiences through user interviews, journey mapping, and prototyping. I have tested software since 2018 and test against WCAG accessibility standards.

SKILLS

User Research: User interviews, surveys, interview guides, synthesis, journey mapping
UX Design: Information architecture, wireframing, prototyping, design systems (USWDS), responsive design
AI-Assisted Workflow: Claude Code and Google Antigravity for wireframing, screen iteration, and implementing designs. AI for research and synthesis, with sources verified
Accessibility & QA Testing: WCAG (keyboard, VoiceOver, Lighthouse, WAVE), functional and regression testing, test case design
Tools: Figma, FigJam, Adobe Creative Suite, Jira, TestRail, Claude Code, Google Antigravity

EXPERIENCE

TopNotch – Boulder, CO (Remote)

UX/UI Designer & QA Analyst (Full-Time) | *Jul 2024 – Oct 2026*

- Led UX for SuiteGen and CheckGen, two AI-powered SaaS products that generate test suites and QA artifacts. Presented direction to the founder and developers to confirm feasibility.
- Built a USWDS-informed design system for a codebase that had none. Extracted tokens with Claude Code and Figma MCP, ending with 147 variables. Developers adopted it and said it makes design changes easier to implement.
- Redesigned navigation so users working with several companies can keep their work separated by organization.
- Led QA on four client products in telehealth, hospitality, and restaurants, writing and managing nearly 2,000 test cases. Gave client design teams UX and accessibility recommendations.

QA Analyst (Part-Time) | *Oct 2018 – May 2023*

- Tested 20+ shipped apps and sites across streaming, AR, advertising, lottery, fitness, and logistics.

Freelance Designer – Remote

Apr 2021 – Present

- Designing an end-to-end SaaS CRM for Convoco. Ran the first user interview and built the information architecture, high-fidelity prototypes, and design system components.
- Designed Convoco's marketing site in Figma and implemented it with AI, condensing a multi-page site into one scrolling page.
- Volunteer designer for FirstJet Air, a planned co-op airline. Designing a member portal and marketing site with developers. Stakeholders are building from my designs.

PROJECTS

CU Denver Financial Aid Redesign – Service Design Case Study

2024

- Ran 4 interviews and 20+ surveys. Built an ecosystem map, a journey map across five touchpoints, and a user flow.
- Reframed the problem around first-generation students, who enter a process that treats every student the same. Scoped to the university layer instead of federal FAFSA rules.
- Proposed four service interventions for communication gaps, redundant steps, and access to information. The CU Denver financial aid office gave positive feedback.

EDUCATION

University of Colorado Denver, BFA, Digital Design – 2021 to 2024
Front Range Community College, AAS, Graphic Design – 2019 to 2021
